

Health Care Discrimination Harms Communities of Color in Illinois

Rapidly escalating medical costs and insurance premiums, rising numbers of people without coverage, and rip-offs by monopolistic private insurers have dominated the Illinois political dialogue surrounding President Barack Obama's plans for comprehensive health reform. On Capitol Hill, the American public is witnessing an historic clash of Washington special interest groups fighting to protect their revenue streams. Yet no one has more at stake than the 103 million people of color in the U.S.,¹ including the 4,516,000 in Illinois.² Throughout the nation's history, communities of color have been forced to accept health care that bears little resemblance to what is experienced by members of more advantaged groups. For people of color in Illinois and nationwide, life is shorter, chronic illness more prevalent and

disability more common. These are predictable side-effects of a health care system that provides these communities in Illinois with narrower opportunities for regular health services, fewer treatment options and lower-quality care.

The infant mortality rate, a leading indicator of community health and well-being, illustrates the huge health disparities between whites and other racial and ethnic groups in Illinois. The infant death rate for whites is 6 per 1,000 live births, compared with 15.3 for African Americans.³ Life expectancy for African Americans in Illinois is 6 to 10 years shorter than that of whites.⁴ About 29 percent of Latinos and 21 percent of African Americans in Illinois are uninsured, compared with 11 percent of whites.⁵

Illinois Disparities

- Among African Americans in Illinois, 10 percent have asthma, compared to 8 percent of whites and 7 percent of Latinos.⁶
- In Illinois, 18 percent of Latina women received no early prenatal care, compared with 23 percent of African Americans and 9 percent of whites.⁷
- The infant mortality rate for African Americans in Illinois is more than two and a half times that of whites.⁸
- The mortality rate for African Americans in Illinois is 35 percent higher than for whites.⁹
- Despite growing evidence of racial disparities in health status and medical services, no system exists in Illinois for collecting comprehensive state and local data on disparities. As a result, many questions about the health of people of color in Illinois remain unanswered. For example, it is not known how many African Americans or Latinos (compared to whites) have forgone care because they can't afford it.
- The U.S. Bureau of Labor Statistics estimates that 10.1 percent of Illinois's labor force is unemployed.¹⁰
- In Illinois, 1,737,876 people were uninsured in 2007.¹¹
- Almost 30 percent of Latinos in Illinois are uninsured, more than two and a half times the rate for whites. The rate for African Americans is more than 90 percent higher than for whites.¹²
- Health insurance premiums for Illinois working families have skyrocketed, increasing 73 percent from 2000 to 2007.¹³
- The full cost of employer-sponsored health insurance in Illinois is projected to grow at an annual rate of 8 percent, compared to a 0.02 percent increase in income.¹⁴
- About 950,000 working non-elderly adults in Illinois lack health insurance. That comprises 65 percent of the total non-elderly uninsured population.¹⁵

Illinois Racial and Ethnic Disparities by Health Indicator

Health Indicator	White	African American	Latino	Other
Infant Mortality Rate (deaths per 1,000 live births)	6	15.3	6.2	-
Diabetes Mortality Rate (deaths per 100,000 population)	21.9	38.4	-	18.7
Annual AIDS Case Rate (per 100,000 population)	5.3	49	13.9	-
Living in Poverty	9.6%	35%	23%	13%
Enrolled in Medicaid	7.8%	24%	19%	12%
Uninsured	11%	21%	29%	12%
