

# Health Care Discrimination Harms Communities of Color in Missouri

Rapidly escalating medical costs and insurance premiums, rising numbers of people without coverage, and rip-offs by monopolistic private insurers have dominated the Missouri political dialogue surrounding President Barack Obama's plans for comprehensive health reform. On Capitol Hill, the American public is witnessing an historic clash of Washington special interest groups fighting to protect their revenue streams. Yet no one has more at stake than the 103 million people of color in the U.S.,<sup>1</sup> including the 1,046,000 in Missouri.<sup>2</sup> Throughout the nation's history, communities of color have been forced to accept health care that bears little resemblance to what is experienced by members of more advantaged groups. For people of color in Missouri and nationwide, life is shorter, chronic illness more prevalent and

disability more common. These are predictable side-effects of a health care system that provides these communities in Missouri with narrower opportunities for regular health services, fewer treatment options and lower-quality care.

The infant mortality rate, a leading indicator of community health and well-being, illustrates the huge health disparities between whites and other racial and ethnic groups in Missouri. The infant death rate for whites is 6.6 per 1,000 live births, and 13.8 for African Americans.<sup>3</sup> Life expectancy for African Americans in Missouri is 6 to 10 years shorter than that of whites.<sup>4</sup> About 26 percent of Latinos and 22 percent of African Americans in Missouri are uninsured, compared with 13 percent of whites.<sup>5</sup>

## Missouri Disparities

- In Missouri, almost 10 percent of African-American adults have been diagnosed with diabetes, more than 75 percent higher than the rate for Latinos.<sup>6</sup>
- Among adult African Americans in Missouri, 9.4 percent have asthma, compared to 8.4 percent of whites.<sup>7</sup>
- In Missouri, 22 percent of Latina women received no early prenatal care, compared with 21 percent for African Americans and 11 percent for whites.<sup>8</sup>
- The infant mortality rate for African Americans in Missouri is more than twice that of whites.<sup>9</sup>
- The mortality rate for African Americans in Missouri is more than 30 percent higher than for whites.<sup>10</sup>
- Despite growing evidence of racial disparities in health status and medical services, no system exists in Missouri for collecting comprehensive state and local data on disparities. As a result, many questions about the health of minorities in Missouri remain unanswered. For example, it is not known how many African Americans or Latinos (compared to whites) have forgone care because they can't afford it.
- The U.S. Bureau of Labor Statistics estimates that 9 percent of Missouri's labor force is unemployed.<sup>11</sup>
- In Missouri, 750,218 people were uninsured in 2007.<sup>12</sup>
- About 22 percent of African Americans in Missouri are uninsured, more than 65 percent higher than the rate for whites.<sup>13</sup>
- Health insurance premiums for Missouri working families have skyrocketed, increasing 76 percent from 2000 to 2007.<sup>14</sup>
- The full cost of employer-sponsored health insurance in Missouri is projected to grow at an annual rate of 8.7 percent, compared to a 0.2 percent increase in income.<sup>15</sup>
- About 380,000 working non-elderly adults in Missouri do not have health insurance. That comprises 66 percent of the total non-elderly uninsured population.<sup>16</sup>

### Missouri Racial and Ethnic Disparities by Health Indicator

Health Indicator	White	African American	Latino	Other
Infant Mortality Rate (deaths per 1,000 live births)	6.6	13.8	6.6	-
Diabetes Mortality Rate (deaths per 100,000 population)	22.5	51.2	-	-
Annual AIDS Case Rate (per 100,000 population)	6.4	45.9	25	-
Living in Poverty	12%	32%	30%	21%
Enrolled in Medicaid	11%	26%	24%	18%
Uninsured	13%	22%	26%	-

Note: - denotes insufficient data in state.
