

# Health Care Discrimination Harms Communities of Color in Nevada

Rapidly escalating medical costs and insurance premiums, rising numbers of people without coverage, and rip-offs by monopolistic private insurers have dominated the Nevada political dialogue surrounding President Barack Obama's plans for comprehensive health reform. On Capitol Hill, the American public is witnessing an historic clash of Washington special interest groups fighting to protect their revenue streams. Yet no one has more at stake than the 103 million people of color in the U.S.,<sup>1</sup> including the 1,092,000 in Nevada.<sup>2</sup> Throughout the nation's history, communities of color have been forced to accept health care that bears little resemblance to what is experienced by members of more advantaged groups. For people of color in Nevada and nationwide, life is shorter, chronic illness more prevalent and

disability more common. These are predictable side-effects of a health care system that provides these communities in Nevada with narrower opportunities for regular health services, fewer treatment options and lower-quality care.

The infant mortality rate, a leading indicator of community health and well-being, illustrates the huge health disparities between whites and other racial and ethnic groups in Nevada. The infant death rate for whites is 5.6 per 1,000 live births, compared with 12.2 for African Americans.<sup>3</sup> Life expectancy for African Americans in Nevada is 6 to 10 years shorter than that of whites.<sup>4</sup> About 35 percent of Latinos and 18 percent of African Americans in Nevada are uninsured, compared with about 15 percent of whites.<sup>5</sup>

## Nevada Disparities

- In Nevada, 38 percent of Latina women received no early prenatal care, compared with 34 percent for African Americans and 20 percent for whites.<sup>6</sup>
- The infant mortality rate for African Americans in Nevada is more than twice that of whites.<sup>7</sup>
- The mortality rate for African Americans in Nevada is 85 percent higher than for Asian or Pacific Islanders and almost double the rate for Latinos.<sup>8</sup>
- Despite growing evidence of racial disparities in health status and medical services, no system exists in Nevada for collecting comprehensive state and local data on disparities. As a result, many questions about the health of minorities in Nevada remain unanswered. For example, it is not known how many African Americans or Latinos (compared to whites) have forgone care because they can't afford it.
- The U.S. Bureau of Labor Statistics estimates that 11.3 percent of Nevada's labor force is unemployed.<sup>9</sup>
- In Nevada, 468,808 people were uninsured in 2007.<sup>10</sup>
- The percentage of Latinos without health insurance—35 percent—is more than twice as large as the rate for whites. About 18 percent of African Americans in Nevada are uninsured, compared to 15 percent of whites.<sup>11</sup>
- Health insurance premiums for Nevada working families have skyrocketed, increasing 55 percent from 2000 to 2007.<sup>12</sup>
- The full cost of employer-sponsored health insurance in Nevada is projected to grow at an annual rate of 6.8 percent, compared to a 0.9 percent increase in income.<sup>13</sup>
- About 220,000 working non-elderly adults in Nevada lack health insurance. That comprises 65 percent of the total non-elderly uninsured population.<sup>14</sup>

**Nevada Racial and Ethnic Disparities by Health Indicator**

Health Indicator	White	African American	Latino	Other
Infant Mortality Rate (deaths per 1,000 live births)	5.6	12.2	4.5	-
Diabetes Mortality Rate (deaths per 100,000 population)	15	24.6	-	-
Annual AIDS Case Rate (per 100,000 population)	12.4	59.8	15.4	-
Living in Poverty	9.6%	28%	23%	13%
Enrolled in Medicaid	3.9%	24%	9.6%	-
Uninsured	15%	18%	35%	19%

Note: - denotes insufficient data in state.
